Introduction

- Introduction

Custom Blocks Example I

Theorem 1.2: Pythagoras

In a right-angled triangle, the square of the hypotenuse is equal to the sum of the squares of the other two sides.

- ① First item
- ② Second item
- ③ Third item
- ④ asdf

Concept Concept: Probability: T

The probability of an event is a measure of the likelihood that the event will occur.

Custom Blocks Example II

Definition Definition: Function: A

function is a relation that assigns exactly one output to each input.

Example Example: Fibonacci Sequence: T

he sequence starts with 0 and 1, and each subsequent number is the sum of the previous two.

Proof Proof (Sketch): T

he proof follows by induction on n .

Unordered List Example I

- First item
- Second item
- Third item
- asdf
- asdf
- asdf
- asdf
- asdf
- asdf
- asdf
- asdf
- asdf
- asdf

Unordered List Example II

- asdf
- asdf
- asdf
- asdf
- asdf
- asdf
- asdf

Ordered List Example

- ① First item
- ② Second item
- ③ Third item

Code Block Example

```
printf("Hello World");
```

Automatic Frame Break Example I

Automatic Frame Break Example II

Concept Concept: Probability: T

he probability of an event is a measure of the likelihood that the event will occur.

- ① First item
- ② Second item
- ③ Third item
- ④ Third item
- ⑤ Third item
- ⑥ Third item
- ⑦ Third item
- ⑧ Third item
- ⑨ Third item
- ⑩ Third item

Automatic Frame Break Example III

Concept Concept: Probability: T

he probability of an event is a measure of the likelihood that the event will occur.

Concept Concept: Probability: T

he probability of an event is a measure of the likelihood that the event will occur.

Concept Concept: Probability: T

he probability of an event is a measure of the likelihood that the event will occur.

Concept Concept: Probability: T

he probability of an event is a measure of the likelihood that the event will occur.

Automatic Frame Break Example IV

Concept Concept: Probability: T

he probability of an event is a measure of the likelihood that the event will occur.
